-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 10 July 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 2-4 and 6-11 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 2-4 and 6-11 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 3628

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

1. Claims 2-3, 6, 10-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Espinoza, Galina. (*Your Fund's New Best Friend. Money.* New York: Feb 1999. Vol. 28, Iss. 2; p. 148.) in further view of Herman (US PG. Pub. No. 2005/0234811) in further view of Kossovsky (US PG. Pub. No. 2002/0002524 A1).

Re claim 6: Espinoza discloses:

a) allowing a client to specify a price specification of securities to be bought or sold;

(b) allowing a client to specify a volume of the securities;

Art Unit: 3628

(c) allowing a client to specify conditions for buying or selling the securities;

("When you place your order for 100,000 IBM shares via OptiMark, you enter the number of shares you'd like to purchase and at what price. But unlike a traditional order, which quotes a fixed price for a specific number of shares, you can enter a range of prices-and vary the number of shares you'd buy at each level. So you could indicate you'd buy 50,000 shares at \$175, or 100,000 shares at \$175.25, or 150,000 shares at \$175.50, but none at \$176.")-see p. 3, para. 2.

(e) issuing a hidden order via the computer for the volume of the securities at the price under the specified conditions; Espinoza discloses ("Allow traders to make offers anonymously... When you place your order for 100,000 IBM shares via OPTIMARK, you enter the number of shares you'd like to purchase and at what price...Other users, meanwhile, enter their own buy and sell criteria. No one sees any of the data...AN OPTIMARK supercomputer housed in Toronto analyzes all the data...")-see p. 3, pars. 2-4.

Espinoza does not disclose:

Art Unit: 3628

(d) allowing the client to specify that a current order thereof be hidden from other clients. Herman, however teaches ("Because the Request for Bid was marked as Sealed, the response contents need to be hidden from all users until the date and time of the bid opening specified by the buyer.")-see para. 99, and pars. 104, 108. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Espinoza to include marking a bid as hidden as was shown by Herman in order to assure bidders that the bid evaluation process is fair to all participants;

Espinoza does not specifically disclose:

(f) displaying all pending orders including the hidden order on a screen of the computer, together with an indication of whether each pending order is specified as a hidden order or not. Kossovsky, however discloses ("Many factors go into deciding what information about bids should be made available to bidders before and after the closing of the auctions. In an open cry auction, one could conceal the identity of the bidders, or conceal the association between the bidders and the bids. In sealed bid auctions, the

Art Unit: 3628

identity of the bidders and/or their bids could be revealed to other bidders after the close of auction. Alternatively, only the winning bids and/or bidder's identity could be revealed.") - see para. 146 and Herman discloses ("the Request for Bid was marked as Sealed, the response contents need to be hidden from all users...") - see para. 99. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Espinoza to include having the option of choosing what information is displayed to bidders as was shown by Kossovsky and marking a bid as sealed (contents hidden from all users) as disclosed by Herman in order to assure bidders that the bid evaluation process is fair to all participants and to prevent a lack of bidding from smaller, less well funded bidders;

Espinoza and Herman do not disclose:

(g) providing the other clients with information on all pending orders, including prices and volumes of the securities being traded, but excluding those of the hidden order. Kossovsky, however discloses ("Many factors go into deciding what information about bids should be made available to bidders before and after the closing of the

Art Unit: 3628

auctions. In an open cry auction, one could conceal the identity of the bidders, or conceal the association between the bidders and the bids. In sealed bid auctions, the identity of the bidders and/or their bids could be revealed to other bidders after the close of auction.

Alternatively, only the winning bids and/or bidder's identity could be revealed.")-see para. 146.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Espinoza and Herman to include having the option of choosing what information is displayed to bidders as was shown by Kossovsky in order to assure bidders that the bid evaluation process is fair to all participants and to prevent a lack of bidding from smaller, less well funded bidders;

Re claim 2: Espinoza discloses:

step (a) specifies the price of the securities that has a given range. ("you can enter a range of prices")-see p. 3, para. 2;

Re claim 3: Espinoza discloses:

step (b) specifies the volume of the securities that has a given range. ("you can enter a range of prices-and

Art Unit: 3628

vary the number of shares you'd buy at each level. So you could indicate you'd buy 50,000 shares at \$175, or 100,000 shares at \$175.25 or 150,000 shares at \$175.50, but none at \$176.00")-see p.3, para.2;

Re claim 10: Further a computer-readable recording medium storing a program causing a computer to function would have been necessary to perform previously rejected claim 6 and is therefore rejected using the same art and rationale.

Re claim 11: Further a transaction supporting apparatus would have been necessary to perform previously rejected claim 6 and is therefore rejected using the same art and rationale;

2. Claims 4, 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Espinoza in view of Herman in view of Kossovsky as applied to claim 6 above, and further in view of Kalmus (US. Patent No. 4,674,044).

Re claim 4: Espinoza, Herman and Kossovsky do not disclose:

step (c) specifies a condition that inhibits partial agreement between orders at a particular point in time. Kalmus however, teaches ("The processor 10 first determines

Art Unit: 3628

whether or not each received order can be executed, i.e., "qualifies" the order. There are various reasons why an order will not be executed by the market maker. Thus, for example, the customer may seek to sell stock above the current bid price or to purchase the security below the current asked price. A customer may seek to trade a number of shares which exceeds the amount which the particular market maker is willing to accommodate, either in gross or for any one order. Orders not executable, i.e., orders not qualified, are either stored in memory in the processor 10 for later execution if they become qualified (such as by a favorable change in the market price for a security which can then accommodate the customer's price limits...)-see col. 5, lines 6-20. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Espinoza, Herman, and Kossovsky to include qualifying an order for execution by comparing its specifics to predetermined criteria as shown by Kalmus in order to facilitate the trading transaction and to provide inventory control for the trader.

Art Unit: 3628

Re claim 7: Espinoza, Herman and Kossovsky do not specifically disclose:

further comprising changing the conditions on the order issued by said step (e). Kalmus disclose ("the processor 10 in accordance with the instant invention signals the trader at station 15 who is then given the opportunity to readjust his quantity or other market-characterizing criteria.")-see col. 5, lines 37-40. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Espinoza, Herman, and Kossovsky to include changing trade criteria as was shown by Kalmus in order to allow the trader to change a trade position to reflect current market conditions.

3. Claims 8, 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Espinoza, Herman, and Kossovsky as applied to claim 6 above, and further in view of Lupien (US Patent No. 6,012,046).

Art Unit: 3628

Re claim 8: Espinoza, Herman, and Kossovsky do not disclose:

further comprising canceling the order issued by said step (e). Lupien et al. shows ("To operate the present invention as a continuous crossing network, then control should return to step 108 whenever a new order is entered or an **existing order canceled** or modified.")-see col. 11, lines 17-20. It would have obvious to one having ordinary skill in the art at the time of the applicant's invention to modify Espinoza, Herman, and Kossovsky et al. to include canceling an existing order as was done by Lupien et al. in order to give the trader the option to end the transaction if he is not satisfied with the conditions.

Re claim 9: Espinoza, Herman, and Kossovsky do not disclose:

wherein said canceling the order cancels the order even if a partial agreement with another order is made.

Lupien et al.

shows a computerized crossing network that allows traders to input as orders a satisfaction density profile which incorporates a two-dimensional format one dimension being

Art Unit: 3628

price, the other being size of a transaction, that as a whole characterize the trader's degree of satisfaction at each (price, size) and ("Each element of the satisfaction density profile, called a satisfaction density value, indicates the trader's degree of satisfaction to trade that size order at that price. In the representative embodiment, each satisfaction density value is a number between zero and one, with zero representing no satisfaction (i.e., will under no circumstances trade that quantity at that price) and one representing total satisfaction.")-see col. 4, lines 8-21. The invention by Lupien et al. discloses a partial agreement because the trader ranks his satisfaction in the price and quantity available. Therefore, if the trader agrees with the price but not the quantity of shares, he will rank that particular transaction as having a low satisfaction rate. Also, Lupien et al. shows ("To operate the present invention as a continuous crossing network, then control should return to step 108 whenever a new order is entered or an **existing order canceled** or modified.")-see col. 11, lines 17-20. Therefore, it would have been obvious to one having ordinary skill in the art at the time of the applicant's

Art Unit: 3628

invention to modify Espinoza, Herman, and Kossovsky to include canceling an order that is in partial agreement as was done by Lupien et al. in order to give the trader or investor an option to end the transaction if he is not satisfied with the conditions.

Response to Arguments

4. Regarding the applicant's suggestion that Kossovsky does not teach displaying all pending orders including the hidden order on a screen of the computer, together with indication of whether each pending order is specified as a hidden order or not. Kossovsky discloses the user choosing the information that is to be made available to the bidders in para. 146. In addition Herman discloses marking a request for a bid as sealed if the contents of the bid are to be hidden from users in para. 99. Therefore, the combination of Espinoza, Kossovsky, and Herman disclose applicant's claimed invention.

Regarding the applicant's suggestion that Herman does not teach allowing the client to specify that a current order thereof be hidden from other clients, the applicant's attention is directed para. 99, wherein Herman teaches "Because the request for bid was marked as sealed, the response content need to be hidden from all users until the

Art Unit: 3628

date and time of the bid opening specified by the buyer."

Herman teaches that the user has an option to mark a bid sealed, therefore inhibiting others from seeing the bid information.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

U.S. Patent No. 6,064,981 (Barni et al.)-cited for its reference a web-based auction supporting anonymous or identified bidding, the customer having the option to post a bid anonymously by selecting a post button on GUI, and displaying bids including an indication of anonymous to the system users.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory

Art Unit: 3628

action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elda Milef whose telephone number is (571)272-8124. The examiner can normally be reached on Monday -Thursday 8:30 am to 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hyung Sough can be reached on (571)272-6799. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
